

Instructions for: AB871L, AB873L & AB874L Light Kits

These products are to be used with Henri Studio fountains, statuary, water garden products, and with similar products. If you have any questions about these instructions or operation of these products, do not use them before contacting your Henri Studio Dealer.

Warning: Do not operate these products without first reading these instructions.
LED Light Kits (AB871L, AB873L & AB874L) can be used safely in or out of water.

A. MODEL NO. AB871L SINGLE UNDERWATER LIGHT KIT WITH TRANSFORMER

The AB871L is a low-voltage Underwater Light Kits, ideal for use where only one underwater light is desired. Underwater light kits create dramatic nighttime effects in backyard ponds, where they provide shimmering illumination of water displays from nozzles, pond statues, waterfalls, and other water features. The underwater light is equally effective in decorative fountains. When used as directed, the AB871L Low-Voltage Underwater Light Kit is a safe, simple, and inexpensive to operate.

• Installation in Ponds

1. This underwater light can be placed in virtually any submerged level or position in a pond. Simply set in on a leveled surface and aim up to illuminate the water spray, pond statue, waterfall, or any water feature. Experiment to achieve desired effect. Best results are often achieved by placing light beneath pond surface area agitated by water motion, causing light to shimmer and reflect on surrounding surfaces.
2. Once light in place, run light cable out of pond and camouflage beneath perimeter rocks or pond border.
3. Attach cable to transformer by inserting cable end-pins into transformer socket and tighten down threaded collar.
4. Mount transformer vertically at least 12" above ground near electrical outlet.
5. Plug transformer power cord into grounded, properly installed 110v GFCI electrical outlet.
6. Adjust light placement in pond for desired effect. Add one of the color lenses included if desired by simply snapping lens into light top.

• Installation in Fountains

This underwater light can be used in virtually any self-contained fountain where nighttime effects are desired. Henri's detachable low-voltage transformer allows you to discreetly feed the light cable through the fountain.

Shell Type Fountains:

1. In shell type fountains, place the light in the fountain shell, aiming it upwards at the fountain statue front.
2. Feed the light cable through the water intake hole of the shell's pump housing, then out the back of the shell.
3. Follow steps 3,4, and 5 of Pond Installation instructions above to connect cable to transformer and activate unit.
4. To stabilize light unit, the light base may be glued to shell surface with several dabs of silicone adhesive; allow to dry according to adhesive instructions, and then fill shell with water.
5. With fountain in operation, experiment with vertical aim of light beam for desired shimmering effect.
6. Snap in your choice of color lenses if desired.

Bowl Type Fountains

1. In bowl type fountains, place the light in the bowl in position to illuminate front of fountain statue.
2. Run light cable through bowl standpipe through bowl and pedestal and out bottom back of pedestal, simply following the same path as the pump cord.
3. Follow steps 3,4, and 5 of Pond Installation instructions to connect cable to transformer and activate unit.
4. To stabilize light unit, the light base may be glued to shell surface with several dabs of silicone adhesive, allow to dry according to adhesive instructions, then fill shell with water.
5. With fountain in operation, experiment with vertical aim of light beam for desired shimmering effect.
6. Snap in your choice of color lenses if desired.

B. UNDERWATER THREE (AB873L) OR FOUR (AB874L) LIGHT KIT WITH TRANSFORMER

To illuminate larger ponds, fountains or other water displays use one, or more, of the Henri Three or Four-Light Kits, allowing you to illuminate large features from several angles at once.

- **Installation of in Ponds**

1. Set lights into pond or display pool in desired positions, illuminating waterfall, water spray, pond statue, or other feature. Best results are often achieved by placing lights beneath pond surface area agitated by water motion, causing lights to shimmer and reflect on surrounding surfaces.
2. Once lights are in place, run light cable out of pond and camouflage beneath perimeter rocks or pond border.
3. Attach cable to transformer by inserting cable end-pins into transformer socket and tighten down threaded collar.
4. Mount transformer vertically at least 12" above ground near electrical outlet.
5. Plug transformer power cord into grounded, properly installed 110v GFCI electrical outlet.
6. Adjust light placements and angles in pond for desired effect; add one of the color lenses included if desired by simply snapping lens into light top.

- **Installation in Larger Bowl-Type Fountains**

1. Place the lights in the bowl, aiming them upwards at the fountain statue.
2. Fed the light cables through the bowl standpipe and out back of bowl. If fountain uses a pedestal beneath the bowl, continue the light cables through pedestal and out back.
3. Follow steps 3,4, and 5 of Pond Installation instruction above to connect cable to transformer and activate unit.
4. Adjust light placement in pond for desired effect. To stabilize light unit, the light base may be glued to shell surface with several dabs of silicone adhesive; allow to dry according to adhesive instructions, and then fill shell with water.
5. With fountain in operation, experiment with vertical aim of light beam for desired shimmering effect. If desired, add one of the four color lenses included with each light by simply snapping lens into light top.
